

ZipLine

Fuelling Station Communications
Construction

MMC Materials and Affiliates are suppliers of Ready Mix Concrete and related construction products from locations in the Southeastern United States.

The Challenge

When MMC Materials required drivers to use a pass card to obtain fuel at some of their locations, they required a phone line at the fueling station.

Instead of trenching (through concrete paving in some instances) they implemented Teletics ZipLine systems providing telephone phone line access from their office buildings at the site to fuel stations. In addition, they implemented ZipLine systems at some asphalt production sites of a sister company to extend Ethernet access. After this, they used ZipLine systems to deliver Ethernet service to portable concrete plants erected at existing locations. Per MMC, Teletics has provided excellent support and service. The Teletics ZipLine can be an effective way to extend voice and data access.

The Teletics ZipLine® Family provides an alternative to trenching a phone line or ethernet connection at half the cost or less. An excellent alternative where running additional conduit to Fuel Islands, Electrical Substations, or between buildings in close proximity to extend PBX and Network connections. Perfect for temporary phones lines into construction sites, security or guard shacks. The ZipLine® reduces exorbitant cabling costs, setup time and manpower costs with installation in less than 2 hours, everything you need is in the box.

When Wires Won't Work®
