Wireless Intercom for Remote Sites

Why Rigstar Selected w*intercom

Rigstar Communications Inc. provides communications services to oil and gas drilling operations throughout Western North America.

“In the past, Rigstar had developed its own wireless intercom,” says Howard Meeres, COO. “We needed a new system that would allow us to develop custom features to give us a competitive advantage, but with minimal custom development costs. Rapid deployment in the field is also a must. Rapid setup and reliability are must haves.”

The Teletics w*intercom system is an industrial grade, fully SIP compliant wireless intercom / phone system with integrated loud ring and public address capabilities. It works right out of the box, and can also be integrated with a number of third party devices and services, allowing custom feature development.

Teletics also provides a complete programming and site diagnostics software suite to keep field techs aware of what is happening, as well as information for head office via remote connections.

“Our new w*intercoms are also very reliable.” Adds Howard,

“We send them out, and they just work, which keeps our service costs low. As you know, in this business, windshield time can rapidly add up.”

Let Teletics w*intercom change your mobile work camp communications for the better. Eliminate cable and equipment that is both complicated and costly. Create your own system design with our best in class hardened SIP technology and add the additional equipment you want, with our help, or on your own. It's your choice!
