

VOIP PBX

FULL FEATURED

HARDENED

OPEN STANDARDS

The standard office PBX is not designed for the rigours of deployment at remote sites or temporary camps. Temperatures and harsh conditions in these locations often cause PBX failure. End result, equipment ends up in pieces.

Performance is what you get from The Teletics Feature Server.

Need to deploy using off the shelf phones, including Android, iPhone, or other smart phones?

✓ **We've already got you covered.**

Need to integrate with your existing SIP VoIP provider?

✓ **We are ready to go.**

Need a system that offers voice, PA, and loud ring?

✓ **Ours has 20 stations built in.**

Need a wireless system that performs in extreme environments?

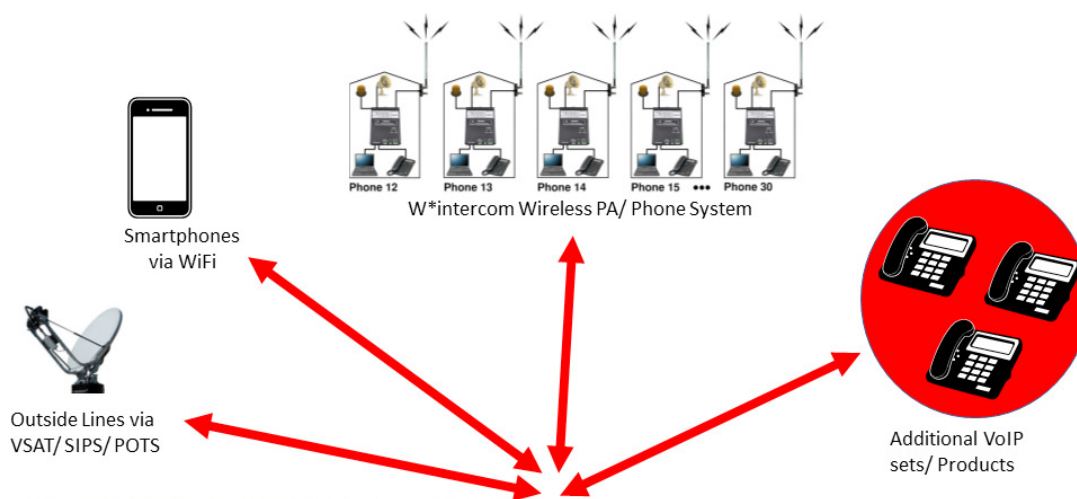

✓ **We've delivered them for over 10 years.**

The Teletics Feature Server is a complete Asterisk platform. It is pre-configured to allow up to 20 VoIP phones to work "right out of the box". For new users, we can combine it with our w*intercom products for a complete wireless site solution that provides a 20 station wireless intercom, plus LOUD ring and Public Address. For customers with asterisk development experience, our Feature Server handbook is at your disposal, to allow you to develop whatever custom features you need.

Typical Deployment for Feature Server

Features

- SIP compliant
- Proven reliability in remote site situations
- No moving parts
- Steel chassis
- Rack mount with 4FXO ports, and SIP only small form factor versions
- +12 VDC or 120VAC operation
- Operating temperature -20° to 50° C

The Feature Server and Feature Server RM is part of the Teletics w*intercom family of products. This is our third generation of communications products that have been tested on drilling rigs world wide. From the Arctic Circle, to the tropics of South America, the Feature Server and Feature Server RM have proven that they are industrial strength!

For more ideas on how the Teletics Feature Server can be the heart of your next field communications project, visit www.teletics.com/application-notes and look under drilling rig. You will discover how The Feature Server can integrate easily with your SIP VoIP provider, and work with all kinds of smart phones.
