

# ZipLine Ethernet eXtreme

*“Teletics ZipLine Ethernet eXtreme bridges the gap  
for Rural Communities.”*

Connect Communications is a provider of quality communications product for businesses in Alberta, Canada to both urban and rural customers.

One of their rural customers was installing a new Panasonic VoIP telephone system that would connect two locations about 5 miles apart. Connect Communications contacted Teletics about using the ZipLine Ethernet eXtreme to provide the high speed wireless link between the two sites.

Matt Hannigan is the owner of Connect Communications. “We wanted a wireless bridge that would integrate with our Panasonic VoIP systems as seamlessly as possible” says Matt. “The ZipLine required no programming – It just worked out of the box”. “All of the necessary additional installation hardware and cables was also included, making installation a snap.”

“Teletics support was spectacular”, adds Matt. “When we needed questions answered, they were there for us.”

Teletics has more direct history with wireless telephone services than almost any other company. Our engineers were designing wireless phone equipment back in the days of pay phones. The ZipLine Ethernet eXtreme is our latest product that provides the quality of service required for VoIP, combined with the rapid deployment that has made the ZipLine famous.

When Wires Won't Work®
