

## Internet & Phone Connectivity for Golf Course Buildings

Teletics' Zipline™ is an ideal point to point wireless solution to connect buildings at a Golf Course to the Internet, providing Phone & Data.

Remote buildings can be connected together and back to the main building where there is Internet. At a course in Calgary, Alberta, ZipLine™ was used to connect four out-buildings including a BBQ area, the Maintenance Shack, an Irrigation Shack and the Snack Shack.

### Dial-up Credit Card Machines Connected

- With ZipLine links from the Snack Shack & the BBQ area back to the Main Building, the golf course can now use its dial-up phone-based credit card machines to accept payment on the course.

### Automated Sprinkler System Connected

- ZipLine was installed connecting the Main Building and the Irrigation Shack, allowing remote control of the irrigation system.

### Maintenance Shack Online

- Staff installed a computer and phone in the Maintenance Shack, allowing staff to work from that building.

# Teletics ZipLine™ Ethernet

## Wireless Ethernet Solution

## The Fastest Link Between Two Points

ZipLine Ethernet is a wireless bridge that provides a 30Mbps Ethernet connection.

ZipLine Ethernet is the fastest, least expensive way to get Ethernet connectivity at a true 30Mbps between two locations. In the past, if you needed Ethernet/LAN Connectivity at a nearby location, you had to either trench cable or call the phone company. With the Teletics ZipLine Ethernet you can **provide Ethernet to another building, in under two hours, and at a fraction of the cost of trenching.**

### We call it the ZipLine.

Trenching costs are **Zip.**

Operating costs are **Zip.**

Hidden installation costs are **Zip.**

Installation is a **Zip!**

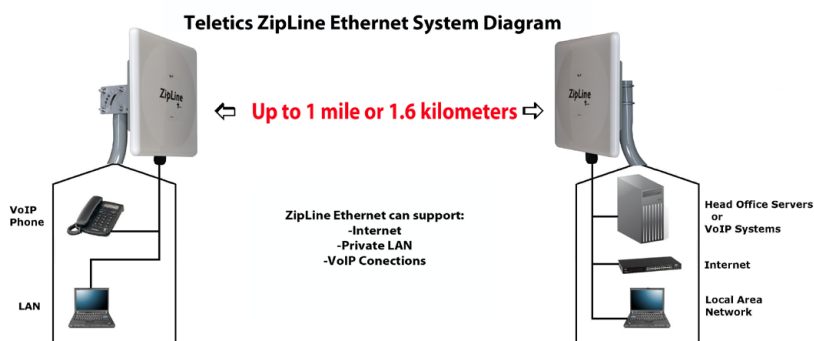

### Who can use the ZipLine Ethernet?

Need Internet/ VoIP but cannot trench cable?

ZipLine Ethernet is ideal for sites such as:

- Construction sites
- Security phone applications
- Between buildings and across parking lots
- For remote metering applications
- Recreational properties
- Cardlock or unmanned fuelling islands

## The ZipLine Advantage

### No Trenching

- Install without licenses
- Install without a survey or right of way map
- Ideal for temporary or permanent installations
- 1 or 2 phone lines with a 100BaseT Ethernet connection, any time, any where

### Fast & Easy Installation

- Can be installed in under 2 hours
- No special radio skills needed
- Software is pre-programmed
- Outdoor radio is complete unit
- No radio cables or tools needed.

### Everything you need is included

### Secure

- 256 bit AES encryption
- System is unique and secure

### Unlicensed Radio Technology

- No special licenses required

**There is never any digging. You don't need surveys or right of way maps. Just point, plug in, and you're done.**
